

Dear Rosemont Ridge Families,

As part of the Oregon Health Authority's Healthy and Safe Schools Plan, Oregon schools are required to test the quality of drinking water every five years to ensure safety for staff and students.

To ensure the safety of drinking water, a total of 110 water sources were tested at Rosemont Ridge Middle School in July. Results were received on Tuesday, Aug. 7, indicating that all 110 site locations are below the permissible exposure limits for lead and copper. The actionable level for lead is 20 parts per billion, and the actionable level for copper is 1,350 parts per billion.

Water at Rosemont Ridge Middle School was last tested in 2016. For more information, or to view the full list of results, please visit the district website.
